

Text Annotation Tool

Team members:

- hieppv (supervisor)
- trind (domain expert)
- thangvq (dev)

Short description:

- Text annotation is a platform that provides some useful features for R&D Content Analyst Team.

The main goal of this platform is to annotate multi-labels on a specific topic (post, comment, ect).

- This tool is inspired by the open source: <https://github.com/chakki-works/doccano>

Main features:

- Authentication: Login, Logout,...
- Project Management: It is very similar to a workplace. Everything should be contained in a project.
- Dataset Management: We can import a csv/json file here.
- Label Management: It will be used for labeling a topic.
- Annotate Data: An UI that help human classify/label the data.
- Statistics: It shows annotation progress of project (completed/incomplete) .

This mini project will be started on July 15 2019.

Milestones:

22/7: Usecase diagrams + Usecase specification

29/7: Design database schema

5/8: Authenticaion

12/8: Project Management

19/8: Label Management

3/9: Annotate Data

9/9: User Management

16/9: Statistics

30/9: Testing, Deployment and Release
